

Digital Safeguard Kit

Personal & Environmental Safeguard Sets

Usage Manual

Formerly called AetherX Digital Safeguards

PERSONAL SAFEGUARDS

For personal energetic use with printed images, digital displays, body placement, and photographs.

ENVIRONMENTAL SAFEGUARDS

For homes, workspaces, vehicles, and other environments using safeguard images and printable image strips.

Important: Keep all safeguard geometry intact. Never place Environmental Safeguards where installation would expose you to open circuits, wiring, moving vehicle components, or other hazards.

About the Digital Safeguard Kit

The Digital Safeguard Kit combines the Personal Safeguard set and the Environmental Safeguard set into one printable and digital collection. The two systems are complementary: Personal Safeguards are intended for personal energetic use, while Environmental Safeguards are intended for placement in homes, vehicles, workspaces, and other surroundings.

The original safeguard system was released under the AetherX name. This combined manual reorganizes the usage instructions into one guide for the Digital Safeguard Kit.

Before You Begin

- Use the safeguard files only in ways that are physically safe and appropriate for the location.
- Do not cut through or crop into the geometric circuitry of a safeguard image. Keep the full geometry intact.
- Personal Safeguards may be used in printed or digital form.
- Environmental Safeguards may be printed as full images or as image strips, depending on the included template.
- When working with another person's photograph, obtain their permission first.
- The safeguards are intended as a spiritual and energetic practice and are not a substitute for medical care, electrical safety measures, radiation shielding, environmental remediation, or professional technical advice.

Part I - Personal Safeguards

The Personal Safeguard images are intended for direct personal energetic use. The original package included safeguard image files and printable PDF versions. They do not require a separate activation or amplification step within the original system.

Ways to Use Personal Safeguards

Printed placement: Print the safeguard on paper or another suitable material. Place it on or near any area of the body where you wish to use it.

Digital placement: Display a Personal Safeguard on a phone, tablet, or other compatible digital device and place the displayed image near or upon the body as desired.

Photograph method: Place a photograph of yourself on the Personal Safeguard image. A photograph of another person may also be used when that person has given permission.

Protect the Geometry

When printing a Personal Safeguard, do not cut across the geometrical pattern. Keep the full design intact. If you trim around a printed safeguard, leave the complete circuitry and outer geometry untouched.

The Effect of the Personal Safeguard Images

The Personal Safeguard images are designed to perform personal healing upon the body to balance out any bombarding internal frequencies caused by EMF, ELF, radiation, gasoline, pollen & allergens, airborne toxins, as well as any inner toxicity residing within the organs, glands, bodily fluids, bodily systems and energy systems of the body.

As the Personal Safeguard Images dampen, neutralize and improve the integrity of electromagnetic frequencies, you can also use a Personal Safeguard on a digital device and place it upon your body to generate an equal healing effect as if printed out on any form of paper.

These descriptions reflect the intended spiritual framework of the system and should not be interpreted as scientifically established medical or environmental protection claims.

Part II - Environmental Safeguards

The Environmental Safeguard set is intended for placement around homes, workspaces, vehicles, and other surroundings. The historical instructions referred to these as Digital Safeguard Images.

What Is Included

- Safeguard Images - printable coded images for placement around an environment or vehicle.
- Image Strips - customizable strips that can be printed horizontally or vertically for placement around suitable surfaces such as switches, pipes, fuse-box exteriors, and dashboards.

General Placement

Print the safeguard image or strip on an appropriate sheet or material and place it in a safe location. The original system did not require separate activation or amplification. As with Personal Safeguards, keep the entire geometric pattern intact and do not cut through the circuitry.

Home & Workspace Placement

- Place full safeguard images in rooms or areas where you wish to use the system.
- Image strips may be positioned around light switches, electrical socket areas, piping, and other suitable surfaces.
- A safeguard may be placed on the exterior door or outer surface of a fuse box.
- Never open a fuse box, remove covers, or expose wiring in order to place a safeguard.

Vehicle Placement

- Safeguard images may be placed around the interior of a vehicle, including suitable dashboard areas, provided they do not obstruct controls, instruments, airbags, visibility, or safe driving.
- The historical instructions describe printing a safeguard on magnetic sheet material for gasoline-fueled vehicles and positioning it near the exterior of the fuel-tank area. Only do so if the location is safely accessible and the item can be securely attached without crawling under an unsafe vehicle, approaching hot/moving components, or interfering with vehicle operation.
- Never place safeguard material on the gas cap, fuel door mechanism, exposed electrical components, or moving parts.

Important Electrical & Vehicle Safety

Safety takes priority over safeguard placement.

- Never touch exposed wiring or open electrical circuits.
- Never install safeguards inside energized electrical equipment.
- Do not put your hands, body, or printed materials near moving vehicle components.
- Do not block ventilation, gauges, controls, mirrors, windows, airbags, pedals, or driver visibility.
- If a placement location is difficult, hazardous, or requires technical disassembly, do not use that location.

Original Energetic Purpose

Within the original system, Environmental Safeguards were intended as a spiritual practice for working with the energetic quality of a space. The source instructions describe the geometry as radiating a "Source

Vibration" and being used around areas associated with EMF/ELF fields, fuel emissions, and other environmental conditions.

These descriptions are part of the spiritual and energetic framework of the Safeguard system. The product is not an EMF-shielding device, radiation-protection device, air purifier, fuel-treatment technology, or substitute for established environmental or electrical safety measures.

Quick Reference

Use	Personal Safeguard	Environmental Safeguard
Body placement	Yes	Not the primary use
Digital display	Yes	Use printable/environmental files as supplied
Photograph method	Yes, with permission	Not part of the main environmental method
Home/workspace placement	Not the primary use	Yes
Vehicle placement	Not the primary use	Yes, only in safe locations
Printable image strips	No	Yes

Recommended Daily Use

Use the safeguards in a simple, consistent way. Choose placements that feel practical, keep the geometry intact, and observe your own subjective experience over time. There is no need to use every safeguard at once.

Care of Printed Safeguards

- Keep printed geometry clean and intact.
- Laminate or place in a protective sleeve if frequent handling is expected.
- Avoid folding directly through important geometric circuitry when possible.
- Replace a printed safeguard if the geometry becomes significantly damaged or unreadable.

Final Safety & Wellness Notice

The Digital Safeguard Kit is intended exclusively as a spiritual and alternative wellness practice. It is not a medical device, diagnostic tool, EMF shield, radiation-protection device, air-purification system, fuel-treatment device, or substitute for professional healthcare, electrical safety standards, environmental remediation, or vehicle maintenance. Always use common sense and established safety practices when placing or using safeguard images.
